

SONDEREGGER RESEARCH CENTER
STAKEHOLDER ENGAGEMENT IN TRANSLATIONAL RESEARCH
PATIENTS, COMMUNITIES AND ORGANIZATIONS

WHO WE ARE

The *Sonderegger Research Center* (SRC) at the UW School of Pharmacy is a recognized UW research center that helps investigators design and conduct patient-centered health services research to improve the health of diverse populations in Wisconsin and beyond. Stakeholder engagement is supported throughout this consultation work. SRC is a designated core resource for applicants seeking ICTR funding.

Faculty lead: Betty Chewing, PhD, School of Pharmacy.

WHAT WE OFFER: SERVICES

The Sonderegger Research Center – UW School of Pharmacy assists researchers through:

- ❖ Consultation on how to design and implement meaningful stakeholder engagement across the lifecycle of a grant. This includes identifying stakeholders, key questions for stakeholders at each stage of the study, planning stakeholder meetings and other assessment modes to gather meaningful input and how best to integrate advice throughout a study.
- ❖ Consultation and support for planning research grants, grants management, IRB applications, secure observational data storage. Templates have been developed to help plan each stage of stakeholder engagement including ongoing groups of multiple stakeholders (e.g. patients, care partners, health care providers, health care managers, advocacy organizations and policy makers.)
- ❖ Ongoing collaborative, statewide partnerships with community groups and other health care partners for PCOR research.

ABOUT PAYMENT

Our funding model is primarily as co-investigator on proposed research.

ABOUT THE INTAKE PROCESS

Please contact us for a consultation. Our initial conversations will benefit from the following information:

- What are your specific goals and questions?
- Investigator Curriculum Vitae
- Provide any written materials available (having those in advance can make our consultation more efficient)

We are happy to have a conversation about whether our resources are a good fit for your needs. If it seems that your project might be better addressed by another ICTR-CAP resource, we will help you make that connection.

STATEMENT: ARE WE A GOOD FIT FOR YOUR NEEDS?

We have broad expertise in facilitating stakeholder engagement across various populations, investigator types, disease states and with flexible, evidence-based methods. Our efforts span the spectrum of health seeking behaviors such as promoting health, preventing disease, and optimally managing existing chronic disease. Our stakeholder engagement techniques are grounded in theory-based work and the PCORI stakeholder engagement rubric.
